Do you have a child between 6- to 15-year-old who would like to take part in a study on how children and adolescents learn adaptive problem-solving skills?

An opportunity to contribute to research by playing online games!

What is the research about?
The aim of this study is to explore how children and adolescents learn to solve problems in new environments.

Who can participate?
Children and adolescents aged 6-15, provided that they can play independently online games using simple functionalities such as clicking and moving an object, and that they have access to a computer or laptop with Internet at home.

Why is this important?
This study will contribute toward the research on teaching children and adolescents how to develop problem-solving skills.

What will you and your child have to do?
**Parent:** Complete questionnaires (10 minutes)
**Child/Adolescent:** Play online games from his/her own home (40 minutes)
Participation is online and completely anonymous.
